ABSTRACT

An awareness of student opinions is important, because today's students are tomorrow's leaders. The eleventh annual "Who's Who Among American High School Students" questionnaire was completed by 24,000 high school juniors and seniors identified as student leaders and high achievers. The survey showed that although high achievers expressed little trust in American government, they expected many services from the federal government. Respondents were conservative in their approach to contemporary issues. Their mandates to the new administration included inflation control and a strong national defense. The students set fairly high standards for themselves and lived by rather rigid personal codes. Traditional relationships were attractive to the teenagers for dating, friendships, sex, and marriage. Respondents favored limiting price increases and paying employees higher salaries to beat inflation. The students supported wage and price controls and better working conditions to encourage productivity; they appeared to be against the free enterprise system, but the majority had little understanding of America's economic system. Little or no first-hand experience with a profit-making organization was reported; however, students expressed hopes for their futures in the business sector. (Author/NRB)

Introduction

This survey was conducted by "Who's Who Among American High School Students," Northbrook, Illinois, during the summer of 1980 for the purpose of determining the attitudes of student leaders in our nation's high schools. It is the largest independent sampling of this segment of the student population taken annually and this year marks its eleventh anniversary.

"Who's Who" believes that, in these rapidly changing times, it is important for the nation to be aware of student opinions and attitudes. Today's teens are not only an important segment of the present voting population, but will be assuming positions of leadership as this country enters the 21st century. Hopefully, as the data from this eleventh national survey is circulated and studied, significant trends will be uncovered.

We regard this survey as an educational experiment. We are in no way attempting to promote or negate any political, moral or social philosophy, organization, firm or individual. Because of our contact with student leaders, we believe we are in a position to gather important facts and meaningful information and, therefore, have a corporate responsibility to conduct this survey.

This year's questionnaire is a composite of questions asked over the past ten years. Prior to this survey, the questionnaire was developed with the help of a 25 student Advisory Board and educators across the country.

Although we of "Who's Who" feel that some of the questions and answers are of a private and controversial nature, we do not hesitate to take the responsibility for the project in order to achieve our objective of identifying and measuring student attitudes. We apologize to anyone offended by any of the material presented herein.

Though by no means a reflection of today's "average" student because it is dealing with the opinions of student leaders and high achievers, we feel this survey does give insights into the thoughts of those leaders who set standards and behavior patterns for others to follow.

Of the 340,000 high achievers featured in the 1980 edition of "Who's Who Among American High School Students," 50,000 students whose biographies were received by July 1, 1980 were sent the survey. Some 24,000 completed questionnaires were returned.

These 24,000 responses form the base of the survey. All students surveyed were members of the junior or senior class during the 1979-80 academic year. They were selected for recognition in "Who's Who" by their principals or guidance counselors, national youth organizations or the publishing company because of their high achievement in academics, activities, community service, athletics or their performance in national scholarship or award contests.

The 340,000 students listed in the fourteenth annual edition of "Who's Who" represent approximately 5 percent of the 6,500,000 students who are high school juniors and seniors during the 1979-80 academic year. They represent 20,000 of the 22,000 public, private and parochial high schools in the nation.

This survey was tabulated by computer. Questions were tabulated by total response; breakdowns by sex, race, geographical region and type of community are also included. On questions calling for write-in answers, results are shown of the most frequently mentioned answers.

Participant Data/Demographics

Total Sample: 24,000

Sex

Male	37%
Female	63%

Race

Caucasian	82%
Black	10%
Other	8%
